## CERTIFICATE of CALIBRATION

We hereby certify that the eight stainless steel weights 10kg - 100mg listed below have been calibrated to fall within O.I.M.L. class M<sub>1</sub> tolerance.

Nominal Value	Difference from Nominal Value mg
10 kg W11929	+ 47
5 kg W11930	+ 83
2 kg W11931	+ 45
500 g W11932	+ 13
100 g W11933	+ 1.0
1 g W11934	+ 0.8
500 mg W11935	+ 0.1
100 mg W11936	+ 0.0

The measured values reported in this certificate were determined by comparison weighing methods against our laboratory's reference standards with a hypothetical density of 8000 kg/m<sup>3</sup> which in air of density 1.2kg/m<sup>3</sup> would balance the nominal weight.

WEIGHTS standard class E<sub>2</sub> weight set number 988 certified on UKAS certificate number UN0627  
Date of issue 28th June 2023 by Norfolk Calibration Services. UKAS calibration number 0260.

**Traceability** to National Standards is established by comparison to Norfolk Calibration Services class E<sub>2</sub> weight sets.

**Recommended recalibration July 2025.** Why should recalibration be carried out?

Recalibration of test equipment is a major requirement for quality management systems. All test weights vary with time due to wear and the collection of grime. The extreme of weight change varies with the environment the weights are used in, consequently periodic recalibration at regular intervals is required.
