CERTIFICATE OF CALIBRATION

We hereby certify that the three stainless steel weights 10kg – 2kg listed below have been calibrated to fall within O.I.M.L. class M₁ tolerance.

Nominal Value	Difference from Nominal Value mg
10 kg 313-85	+ 208
5 kg 164-77	+ 14
2 kg 74-97	+ 59

The measured values reported in this certificate were determined by comparison weighing methods against our laboratory's reference standards with a hypothetical density of 8000 kg/m³ which in air of density 1.2kg/m³ would balance the nominal weight.

Traceability to National Standards is established by comparison to WEIGHTS standard class E₂ weight set number 988 certified on UKAS certificate number UP1228. Date of issue 21st August 2024 by Norfolk Calibration Services. UKAS calibration number 0260.

Recommended recalibration May 2026. Why should recalibration be carried out?

Recalibration of test equipment is a major requirement for quality management systems. All test weights vary with time due to wear and the collection of grime. The extreme of weight change varies with the environment the weights are used in, consequently periodic recalibration at regular intervals is required.
